

YOUR MONEY BITCOIN AND THE BANKS

What does 2021 have in store for us? It's the question on everyone's mind as we head into the new year. Well my dear friends, if 20/20 has taught us anything, that the only thing we can be absolutely certain of right now is uncertainty. A false economy due to temporary government intervention, that is blowing up in our face. The U.S. is facing a dollar collapse by the end of 2021 and an over 50% chance of a double dip recession, says economic Stephen Roach. Roach says, that the US dollar will collapse against other major currencies. The US dollar my friends is now index traded at about 94.41, and it is going down. It is in our opinion, the best thing that you can do with your money now is to invest in gold, silver, and or cryptocurrency, and definitely stay away from the banks. Earlier this year Bitcoin became the first cryptocurrency in history to reach

a market cap over \$1 trillion. “If” you missed out on this incredible run, crypto expert Teeka Tiwari says he believes we all have another opportunity, and so do I. Your life could change dramatically my dear friends, if you take advantage of this rare opportunity.

Our political leaders in Washington has hypnotized this country in wanting a quick fix, an easy handout. As we have seen in the past year our elected officials are happy to give the mass what they are led to believe they want and need, for a price, and that price is control. Unfortunately for all of us, these policies and those that are sure to keep coming as this crisis lingers on, will cause even greater damage to us Americans.

Washington has put us on a very dangerous path, it can be worse than the financial crisis of 2008. The stock market drop as we saw in March 2020 and it can be even worse than the

Great depression. You see my dear friends we have now borrowed so much money that our country could never even hope to legitimately pay it back to our creditors, the largest of which is us, the American taxpayer.

It is time my dear friends, for all of us to take matters into our own hands in order to protect our country and the one's that we love. By putting our money to work for us, so that our money can make more money for us when we are asleep in our comfortable beds. That way my dear friends, if we do fall into a depression and or, the American dollar collapses, our personal wealth will be safe, and will be making us more wealth. JP Morgan says Bitcoin is going head-to-head with gold, BTC price will double or triple if modest crowding out occurs.

We already know that cryptocurrencies can create asymmetric opportunities where you can make \$20 for every \$1 that you invest and sometimes more, of course nothing is guaranteed. However, with the shake up that we are seeing right now I personally believe more of these opportunities will come available in the coming months. Right now today,

cryptocurrencies are the most unstoppable trend in the markets. We must keep in our minds, in order to make wealth, real wealth, sometimes risk must be taken, and anything worth having takes sacrifice.

All right beautiful people, it's time to get down to the nitty gritty. Please turn off all distractions and pay close attention, because in the next few minutes your eyes are going to be open to the truth. The authorities' response to the pandemic crisis has unleashed a destructive force that could wipe out bank accounts across America. Those who don't prepare will watch the value of their bank accounts fall very sharply. American living standards are about to be squeezed as never before.

Millions of unprepared Americans will fall below the poverty line, it's no secret the pandemic has turned our entire economy upside down. More than 30 million people are now receiving some form of employment insurance and for many of them, the jobs that they lost are never coming back. People are lining up at the food banks like we have never seen

before. The pandemic has also gutted millions of small businesses across our country and has destroyed the dreams of retirement for millions of Americans.

According to some estimates, it will force 3.1 million older workers into poverty in their retirement. Riots are erupting across our country, with mobs burning down their own cities. As bad as it all sounds, my sisters and brothers it's about to get a lot worse for those who don't prepare. "If" you have cash sitting in the bank you may well be in trouble. Because, pandemic has helped unleash an unstoppable force that will impact millions of banks across America.

And when I say unstoppable, I sincerely mean it, nobody will be able to stop it, not the Congress, and not our president. This is why the Wall Street Journal wrote an article That said it's invisible it's inevitable, and why Yahoo finance warned

more than \$40 trillion of retirement savings are at risk. You see my dear friends, the feds have already printed a little over \$3 trillion dollars, and their promising to print unlimited amounts of money to stimulate the economy. And please believe me when I say this is not good.

Maybe you are already feeling this in your life, you have probably already notice you are paying a lot more at the grocery store. Not to mention the medical bills and the cost of prescriptions, all of these things are totally out of control. Two in every five Americans adults can't even come up with \$400 if they had an emergency. My dear friends, with all of this money printing leaving money in the Bank is the worst thing you could possibly do.

While our Central Bank is printing trillions of dollars, increasing the supply of dollars like never before, Bitcoin supply is guaranteed to decline. Which means the rest, majority of people who hold their savings in cash are being robbed, while the small fraction who holds wealth in Bitcoin

are making a fortune. This is why Pantera Capital wrote a letter to its clients saying, get out of paper money and into Bitcoin. This is money talking to money, I suggest all of you to listen.

Just look what happened back in March, when the feds announced it would print more money. Bitcoin started a 148% run, I don't know what you're doing with your money my friends However, I bet my bottom dollar you're not seeing that kind of return. This is the reason why my team and I recommend Bitcoin to anyone who wants to protect and grow their wealth in the months and years to come.

According to a new report in the Wall Street Journal the federal government is already preparing for more stimulus checks, if it is announced more money printing or given any kind of easy money policy, it could actually send cryptos soaring higher. Even if, you started with a few hundred dollars it could still be life-changing my dear friends. Let me give you an example, a tiny crypto by the name of Cardano

is up as much as 476% since March 2020. Or look at another small crypto that is name vechain, it is up as much as an incredible \$823% since March of this year, if you had invested just \$1,000 a few months ago you would have made as much as \$9,230, you get me?

These explosive gains are possible because many of these small cryptos trade for cents on the dollar, crdano for example is trading at 13 cents, that means it only needs to go up another 13 cents and boom, boom, boom, you double your money you get me?. Let us look at another small crypto that is called chainlink, it is up as much as an incredible 1,019% since March.

If, global investors reallocated just 5% of their financial assets to bitcoin that would be \$14.7 trillion in increased demand. That alone is enough to push Bitcoin 125 times higher. Just think about this, that would be enough to turn a small investment of \$5,000 into a big whopping \$625,000, my dear friends do you get me? After many years of resisting,

institutions are finally opening their eyes and accepting crypto as another asset class, worthy of being held alongside stocks and bonds.

Today more than 64 million businesses around our world are using Square's cashless system, and they are embracing Bitcoin. In its latest earnings report, Square's cash app reported \$875 million in Bitcoin revenue, which is about a 600% increase from the previous year. Also, PayPal plans to roll out crypto trading to its 325 million users. Even visa and MasterCard recently announced projects and collaborations involving cryptos.

Open your eyes to this, Fidelity the largest provider of 401(k) retirement plan services just launched their first Bitcoin fund. Just think about this, Fidelity has over \$7 trillion in assets under management. Imagine what that will do to bitcoin if some of that money starts moving into crypto, my dear friends it doesn't get any more mainstream than that.

Ladies and gentlemen, boys and girls, sisters and brothers, I could go on all day showing you different companies, or different financial institutions, who are now part of Bitcoin, or have plans to do so. However, I do believe that my team and I have opened your eyes to what is happening today around our world concerning not only Bitcoin, but to crypto in a very big way. I also do believe, we have given you enough information why you should not depend on paper currency or the banks anymore.

Friends, it's time to make a decision, to take a chance of leaving your money in the banks, or put your money to work where it's safe and will make you more money by being a part of Bitcoin or one of the other crypto. However, if you want to play it super safe, at least invest your money in gold or silver. These are very dark times my friends, I am asking you from the bottom of my heart, do something with your money, but do not leave it in the banks. You must keep the wealth of your family and loved one's safe and being in a position to increase your wealth. Please do not wait too long, because if you do, it might be a lot of regret holding your heart, and that would break my heart. I want you to prosper, to have wealth, and to be happy.

May good health and prosperity be always with you.

Humbly yours Paul Earl.
